SEND intent

Computing

Computing

SEND intent

At Moss Valley, we want our computing curriculum to reflect an inclusive approach. We want pupils to develop a positive and enthusiastic attitude towards using and applying their computing skills. Pupils will be given opportunities to develop a range of knowledge and skills which they can use and apply in a wide variety of contexts and will be used to support learning in other subject areas.

Children with SEN or additional needs at Moss Valley are supported to use technology, to solve problems and develop logical thinking skills when tackling new experiences. Pupils will be given many opportunities to be creative as they explore the many uses of technology within the world. We want pupils to understand the role of technology within their lives now and in the future. We aim to give our pupils access to a variety of devices and technology, which motivate and excite our pupils to want to learn and experience more. We aim for our pupils to have the knowledge, skills and understanding to effectively use technology now, and in the future.
