Design & Technology

Design & technology

SEND intent

At Moss Valley, in design and technology, pupils combine practical and technological skills with creative thinking to design and make products that meet human needs. They learn to use current technologies and consider the impact of future developments. They learn to think creatively, solving problems as individuals and members of a team. Our Moss Valley curriculum for design and technology acknowledges that learners with additional needs are likely to have difficulties in their fine motor skills and critically analysing their products with the same degree of accuracy as their peers.

To make the design and technology curriculum inclusive for all, teachers will anticipate possible barriers to learning activities for those with SEN or additional needs. For some activities, pupils will be able to take part in the same way as their peers. Where this is not the case, modifications and adaptations will be made to ensure everyone is included. Providing scaffolds, different resources/equipment and giving support will allow them to work towards the same learning objective as their peers.
